Distributed Intelligence

2019. november 22., péntek 9:50 (20 perc)

Military science enters a new era. An organic transformation of military engineering and IT is driven by a fundamental change, the Distributed Ledger Technology and Blockchain combined with Artificial Intelligence and computer vision. The potential uses of these technologies represent a multitude of military technical scientific challenges. The technology makes it possible to co-operate freely with cryptographic procedures on distributed networks without governmental control, but can also serve military and defense management objectives for more efficient services.
